

What is a Tek Home®

A Tek Home® is a residence that always looks “Better Than New”™, is easy to maintain using environmentally responsible products. It is a home that has its architectural surfaces such as glass, stone, porcelain, wood, metal, tile, fiberglass and painted surfaces treated with Tekon® Easy Clean Forever® products.

Tekon® products keep surfaces looking “Better Than New” and they clean, protect and shine while repelling water, oil, dust, and environmental contaminants that cause corrosion, oxidation and stain; at the same time improving indoor air quality.

In all cases, maintenance is reduced by at least 50% and the use of harmful chemicals is avoided all together.

Tek Homes® Shine Throughout!

Tekon® protective products create a covalent bond with the molecules comprising the surface of glass, granite and other hard washable surfaces, providing a diamond-like coating that reduces scratching and repels water, dust and oil. Glass and granite stays cleaner and brighter than ever. Even spotted, stained and damaged glass can be restored to “Better than New”™. Granite, Marble, Natural Stone and Synthetic Stone become more hygienic. Interior and Exterior flooring resist stains and are easily cleaned once sealed with the Tekon® Process. All these surfaces can be

easily maintained as well as wood, stainless steel, shower door trim and fixtures. Tile, Porcelain and Grout surfaces stay cleaner longer and are easier to maintain with Tekon® Products. Toilet bowl and bathtub rings are a thing of the past! Just Imagine... No more water spots.

Why does Tekon® work so well?

Glass, stone metal and other architectural materials have microscopic hills and valleys on the surface. These are collection points for contaminants like water, dust, oil, salt, mildew, bacteria, lime and other minerals.

Constant exposure to these contaminants - spots, stains, corrodes, and oxidizes the surface destroying the new, natural look of the material. Once these contaminants penetrate the surface, they are difficult to remove. When harmful chemicals are used to clean these surfaces, they open the surface pores inviting more contaminants and speeding up the oxidation process.

Tekon® Products work with the natural structure and chemistry of a surface

material, not against it. Tekon® formulations vary depending upon the surface being protected. For example, silica material like glass, granite, tile and porcelain actually attract contaminants like a magnet because

they contain an unbounded oxygen molecule just looking for a contaminant to bond to. These materials require constant cleaning. The Tekon® process eliminates this problem, thereby reducing maintenance by at least 50%.

Why Tekon® products?

Tekon® products are not “new” products. We have used these products for years in industrial applications. Tekon’s ultimate goal is to identify the most cost effective, environmentally friendly cleaning/protective products and is offering them in one simple product line to homeowners.

Better Indoor Air Quality Through Advanced Technology

You can have a beautiful...

Eco-Friendly
Tek Home®

From...

How We Can Help!

We have a growing number of independent professional applicators across the country who are willing and able to turn your home into a "living showcase" of home beauty and cleanliness.

These professionals have experience in providing services that will generally exceed that of most "do it yourselves". They are also capable of using certain professional products that are not available to the average consumer.

So contact us now. A Tek Home® treatment can lay the foundation for a more beautiful home and less maintenance in the future.

How Does Tekon® Work?

Tekon® products fill in the microscopic crevices of the glass surface and other hard surfaces like stone, metal, plastic etc. with a permanent hydrophobic and anti-static coating that repels water, oil and dust.

Tekon® products create a covalent bond that is Super Hydrophobic (water repellent), Oleophobic (oil repellent), anti-static and long lasting. Tekon® products are also stain resistant and provide corrosion protection that resist water and other contamination that would otherwise damage the surface.

Bacteria, mold and fungus cannot spread, keeping the surface more hygienic and easy to clean.

Cleaning with Tekon's Microfiber cloth and Repellant Wash® restores the original finish indefinitely and makes surfaces look **"Better Than New"**.

You Get All this as
a Tek Home® Client

As a **TEK Home® Owner**, you will receive service from professionals trained to:

- Respect Your Time
- Respect Your Home
- Apply Professional Tekon Products Effectively
- Train You or Your Home Maintenance Staff on Maintenance Techniques
- Ensure you are 100% satisfied with results
